Education

Simon Fraser University - Bachelor of Science in Computer Science **EXPECTED APR 2028**

Relevant Coursework: Systems Programming, Distributed Systems, Artificial Intelligence, Networking, Data Science

Experience

Amazon | **Vancouver, BC, Canada** **SEP 2026 – DEC 2026**

Software Development Engineer Intern *Typescript, Java, AWS, React*

- Joining the Gift Cards team, Fall 2026

Qualcomm | **Markham, ON, Canada** **MAY 2026 – AUG 2026**

AI Infrastructure Software Engineering Intern *C/C++, Python, ONNX, GenAI, QNN, Hexagon*

- Enabled GenAI models exceeding device RAM to run on-device through the **Genie SDK** while minimizing inference latency by designing an **MRU-based graph eviction strategy** which dynamically pages KV-cache graph partitions
- Built and distributed an **internal agentic dev harness** used by ∼**20 engineers** across AISW Markham after an **80+ engineer** rollout, decomposing epics into linked **JIRAs** and dispatching **worktree** agents that open draft PRs
- Built automated model validation tool for the **Hexagon NPU** graph pipeline, detecting **8+ categories** of ONNX-to-QNN graph compilation defects including quantization mismatches, redundant data movers, and broken connectivity
- Integrated the graph validator into **Jenkins CI** for model-zoo submissions, created an on-demand validation agent for pre-submission models, and exposed an API to the **QAIRT SDK**, enabling model diagnostics across internal/vendor workflows
- Unified **70+ HexNN math and approximation functions** into an accessible library backed by rigorous unit and on-device testing integrated into **Jenkins CI** for automated regression coverage

Rivian and Volkswagen Group Technologies | **Vancouver, BC, Canada** **MAY 2025 – DEC 2025**

Infotainment Software Engineering Intern *Kotlin, Java, Android, Protobuf, QNX*

- Owned **12+ user-facing features** across Rivian R2 Media App (browsing, search, playback, shuffle, podcasts), delivering an audio visualizer and vendor integrations for Spotify, Apple Music, and Tidal to production builds
- Migrated Media App from fragment-based architecture to MVVM with view controllers consuming data models, cutting RAM usage **40%** and accelerating feature velocity **30%**
- Resolved critical vehicle safety defects including cold-boot launch crashes, unsafe service data handling, and a radio refactor regression that escaped QA, collaborating across platform and QA teams
- Fixed Bluetooth AVRCP metadata errors via caching and content-hash validation, raising accuracy **from 66% to 99%**

SFU Robot Soccer | **Burnaby, BC, Canada** **FEB 2024 – DEC 2026**

Software Team Lead *C++, Python, Qt6, Protobuf, Docker*

- Led **30-member** C++ team; redesigned onboarding workflows reducing new developer ramp-up time **40%**
- Engineered Behavior Tree DSL reducing node boilerplate **10:1** and Play Graph state machine with 12-play transitions evaluating **50+ metrics/tick**, coordinating 6 robots at **180Hz**
- Designed Protobuf networking protocol routing commands to **6 robots** with hot-swappable simulator/hardware modes

Projects

Strike - Agentic Coding TUI *Go, Bubble Tea, WebSocket/SSE, Docker, Nix, GitHub Actions*

- Architected an **event-sourced** Go engine emitting protocol events to decoupled TUI and web clients over JSONL session logs, shipping **14+ releases** across **660+ commits** with **4 external contributors**
- Designed a **multi-agent** coordination protocol with **compare-and-swap** task claims and boundary-checked message passing

VeTool - FPS Matchmaking Service *.NET, PostgreSQL, Next.js, SignalR, Redis, Docker*

- Built matchmaking platform for FPS custom lobbies with real-time drafting, and match history tracking, serving **50+ users**
- Delivered SignalR and Redis event layer achieving **sub-150ms** state sync across horizontally scaled API instances
- Designed high-concurrency PostgreSQL schema with transactional safeguards and indexed lookups for conflict-free writes

Nasdaq ITCH Aggregator - GPU-Accelerated Market Data Pipeline *C++, CUDA, CMake, Python, zlib*

- Built GPU-accelerated Nasdaq ITCH 5.0 pipeline streaming full-day TotalView feeds through a CPU parser into CUDA kernels, computing per-symbol **VWAP**, order imbalance, and bid/ask spread across **16,384 symbols**

Technical Skills

Languages: Python, C/C++, CUDA, C#, Java, Kotlin, JavaScript, TypeScript, Go, SQL, Bash
Frameworks: React, Next.js, .NET, FastAPI, Node.js, Express.js, Spring Boot, Electron, SignalR, GraphQL
Tools & Infrastructure: Docker, AWS (EC2, S3, Lambda), PostgreSQL, MongoDB, Redis, Git, GitHub & GitLab CI/CD, Linux
Concepts: API Design, Distributed Systems, Developer Tooling, Real-Time Systems, LLMs, Applied Machine Learning, Robotics
