EDUCATION

Simon Fraser University - Bachelor of Science in Computer Science

EXPECTED APR 2028

Relevant Coursework: Data Structures & Algorithms, Systems Programming, Distributed Systems, Artificial Intelligence, Networking, Computer Graphics, Computer Vision, Data Science, Robotic Autonomy

EXPERIENCE

Qualcomm | Markham, ON, Canada

MAY 2026 – AUG 2026

AI Infrastructure Software Engineering Intern

C/C++, Python, ONNX, GenAI, QNN, Hexagon

- Enabled GenAI models exceeding device RAM to run on-device through the **Genie SDK** while minimizing inference latency by designing an **MRU-based graph eviction strategy** which dynamically pages KV-cache graph partitions
- Built automated model validation tool for the **Hexagon NPU** graph pipeline, detecting **8+ categories** of ONNX-to-QNN graph compilation defects including quantization mismatches, redundant data movers, and broken connectivity
- Integrated the graph validator into **Jenkins CI** for model-zoo submissions, created an on-demand validation agent for pre-submission models, and exposed an API to the **QAIRT SDK**, enabling model diagnostics across internal/vendor workflows
- Unified **70+ HexNN math and approximation functions** into an accessible library backed by rigorous unit and on-device testing integrated into **Jenkins CI** for automated regression coverage

Rivian and Volkswagen Group Technologies | Vancouver, BC, Canada

MAY 2025 – DEC 2025

Infotainment Software Engineering Intern

Kotlin, Java, Android, Protobuf, QNX

- Owned **12+ user-facing features** across Rivian R2 Media App (browsing, search, playback, shuffle, podcasts), delivering an audio visualizer and vendor integrations for Spotify, Apple Music, and Tidal to production builds
- Migrated Media App from fragment-based architecture to MVVM with view controllers consuming data models, cutting RAM usage **40%** and accelerating feature velocity **30%**
- Resolved critical vehicle safety defects including cold-boot launch crashes, unsafe service data handling, and a radio refactor regression that escaped QA, collaborating across platform and QA teams
- Fixed Bluetooth AVRCP metadata errors via caching and content-hash validation, raising accuracy **from 66% to 99%**

SFU Robot Soccer | Burnaby, BC, Canada

FEB 2024 – PRESENT

Software Team Lead

C++, Python, Qt6, Protobuf, Docker

- Led **30-member C++** team; redesigned onboarding workflows reducing new developer ramp-up time **40%**
- Engineered Behavior Tree DSL reducing node boilerplate **10:1** and Play Graph state machine with 12-play transitions evaluating **50+ metrics/tick**, coordinating 6 robots at **180Hz**
- Designed Protobuf networking protocol routing commands to **6 robots** with hot-swappable simulator/hardware modes

PROJECTS

Follow-Ahead Robot Navigation - MCTS + RL Motion Planning

Python, PyTorch, ROS2, Stable Baselines3, Gymnasium

- Trained **LSTM** human motion predictor achieving **90% accuracy**, integrated predicted action probabilities into **MCTS** UCB selection for frontal following behavior
- Deployed real-time navigation on **Quanser QBot** with **ZED camera** and **Vicon** localization, running at **5Hz** planning frequency

Strike - Agentic Coding TUI

Go, Bubble Tea, WebSocket/SSE, Docker, Nix, GitHub Actions

- Architected an **event-sourced** Go engine emitting protocol events to decoupled TUI and web clients over JSONL session logs, shipping **14+ releases** across **660+ commits** with **4 external contributors**
- Designed a **multi-agent** coordination protocol with **compare-and-swap** task claims and boundary-checked message passing, preventing duplicate work across concurrent agents and failing closed on out-of-team tool calls

YOLO Traffic Analysis - Deep Learning Object Detection Pipeline

Python, OpenCV, Pandas, NumPy, PyTorch, Spark, SQL

- Built ETL pipeline converting LISA dataset annotations to YOLO format, producing **20,000+** normalized day/night samples
- Benchmarked **YOLOv3, v5, v8** over **50 epochs**; v8 achieved **0.74 mean IoU** and **86% precision** vs 20%/16% for v3/v5

TECHNICAL SKILLS

Programming: Python, C/C++, CUDA, C#, Java, Kotlin, SQL, Bash, Docker, Qt6, Android, Networking (TCP, UDP, Sockets)

Machine Learning: PyTorch, scikit-learn, CNNs, RL (A2C, DQN), training pipelines, hyperparameter tuning, model evaluation

Computer Vision: OpenCV, feature & object detection, image pre-processing, augmentation, OCR, error analysis

Robotics & ADAS: Behavior Trees, multi-agent systems, real-time coordination, sensor fusion, Kalman filters, IMU processing

Data & Infrastructure: ETL pipelines, Spark, Databricks, Pandas, NumPy, dataset generation, experiment tracking
